THE SUPPLY OF, POTENTIAL NEED FOR, AND GAPS IN CHILD CARE IN CONNECTICUT IN 2019

In recent years, there has been increasing bipartisan support at all levels of government to ensure working parents have access to high-quality, affordable child care. But amid these efforts, an important underlying question has yet to be answered: **how much additional child care does the country need?**

Without a clear understanding of the actual supply versus the need for care—the child care gap—it is impossible to quantify either the actual child care spaces needed or the corresponding costs associated with closing that gap. Without this information, America is unable to develop a plan to ensure that all families have access to affordable, reliable, and quality care for their children.

Incorporating the most comprehensive child care supply data collected from **Connecticut** to date, and an advanced methodology incorporating parent choice, this analysis provides a long overdue starting point from which the country can understand how much child care is needed. With such data, policymakers can produce evidence-based strategies to improve the supply of child care in a manner that reflects the quantity and type of child care communities actually need.

## UNDERSTANDING PARENT CHOICE

As policymakers review this data and consider how and where to address child care gaps in their communities, it is especially important to consider parent choices and preferences. While this data can be used to calculate the amount of child care needed, the *potential need* for child care should not be construed with the *actual demand* for care. These findings offer a starting point from which **Connecticut** can work to close its child care gaps, but more work needs to be done to both understand parent preferences and incorporate them into policy decisions at the federal, state, and local levels.

<b>Supply</b>	Number of slots offered by legally operated and state-recognized providers
<b>Potential Need</b>	Number of children aged birth through five with all available parents in the labor force
<b>Gap</b>	Number of children who potentially need care but whose families cannot reasonably access formal child care

### Percent Gap by Congressional District

# CONNECTICUT

## Connecticut Child Care Gap Findings

Potential Need <sup>1</sup>	154,069 children
Supply <sup>2</sup>	111,200 slots
Gap	45,726 children
Percent Gap	29.7% of children

## Child Care Supply Across Connecticut

Facility Type	Count	Capacity
Child Day Care Center	1,430	97,389
Family Child Care Home	1,927	11,461
Group Day Care Home	29	337
Additional From Office of Head Start	29	1,685
Department of Defense	1	328

## NATIONAL COMPARISONS

BPC performed a child care gap analysis in 35 states. **Connecticut's** statewide gap of **29.7%** is **lower** than the 35-state average. Rural communities in **Connecticut** are **less underserved** than urban communities—**inconsistent** with trends across the 35-states.

**11,109,000 children** have the potential need for child care.

There is a supply of **7,807,000** child care slots. Child care gap: **31.2%** of the potential need.
